

# IT Excellence Check for maintenance and Asset Management

*Discover and use the full potential of your software!*

Sustainable Asset Management is inconceivable without IT support. Only on the basis of data and its evaluation can well-founded decisions be made and Asset Management measures be sensibly combined. This contributes significantly to achieving various objectives: high availability of machines and plants and their long-term use, maximum safety, reliable control of risks, the best quality of output, and optimal economic efficiency.

Therefore, today most companies use software for their Asset Management. However, the question arises as to whether they are actually using their full potential in the following three dimensions:

1. With regard to the **requirements for the IT system**: Are, for instance, the master data neatly stored, the processes defined, and the responsibilities regulated?
2. With regard to the **suitability of the IT system**: Are all the necessary functions available and are they user-friendly?
3. With regard to the **application of the IT system**: Are key figures and reporting used and are there fault and weak point analyses?

## Status determination in only a few days

How can you make even better use of your Asset Management software and exploit its full potential? And above all: How can added value be increased in the future? Answers to this are provided by the IT Excellence Check, which Orianda conducts in cooperation with the Asset Management experts from dankl+partner consulting. At a fixed price and within two or four days, we analyze the current situation with you and suggest concrete optimization measures.

## At the end of our IT Excellence Check you will know:

- How your maintenance and Asset Management software currently performs and how it compares with companies from your own and other industries.
- Which recommendations for action you can implement to better exploit the potential of your software and generate a higher added value for the entire company.
- Which top recommendations for action will help you get the most out of your software.
- How the optimal target architecture is designed.
- What a meaningful action plan looks like.

Beyond the IT Excellence Check, we will be glad to accompany you on your way to a perfect use of software.

## How we proceed:

The IT Excellence Check is carried out in several steps. First, you use a questionnaire to summarize the current situation in your company. This is the basis for the two- or four-day workshop with you. During the two-day workshop, a quick check is carried out to provide you with information about the current situation. The four-day workshop goes beyond this and also includes the development of a plan of measures and actions based on a cost-benefit analysis.

	Short description	Quick Check	Detail Check
<b>Step 1: Current State</b>	Capture of the current state using the questionnaire	✓	✓
<b>Step 2: Evaluation of the IT application (as-is analysis)</b>	Analysis of the three dimensions „Prerequisites for IT system“, „Suitability of IT system“, and „Application of IT system“	✓	✓
<b>Step 3: Recommended actions</b>	Description of individual potentials and recommendations for action	✓	✓
<b>Step 4: Specification of improvement measures</b>	Development of concrete measures to make better use of potentials		✓
<b>Step 5: Prioritization</b>	Prioritization of the individual measures on the basis of a cost-benefit assessment and formulation of an action plan		✓
<b>Meaningful result report</b>	Starting point for your next steps	✓	✓

### Why Orianda and dankl+partner consulting

- As a team we combine the highest competence in the strategic and technological aspects of sustainable Asset Management.
- Orianda has been successfully implementing Asset Management projects in the SAP environment for 20 years - including management consulting and technology consulting.
- dankl+partner consulting supports you in increasing the performance of Asset Management and maintenance, recognizing your strengths and making optimal use of them for your company's results.
