

# Potential Check SAP Intelligent Asset Management

*Holistic asset management for maximum plant availability*

The digitalization of production is gaining more and more speed: Many machines and plants, tools and vehicles are already equipped with sensors and connected to an IT system. Data is recorded, transmitted and evaluated. All this increases effectiveness, efficiency and flexibility in production.

It is now important that maintenance and asset management keep pace with this development and also use digital technologies. SAP supports this step with SAP Intelligent Asset Management (SAP IAM). The suite consists of five solution modules, all of which access a common database and can be used to implement end-to-end processes for optimal asset availability - always taking into account operational reliability and maintenance costs. What's more: each of the five solutions can also be used individually and even then generates enormous added value for maintenance.

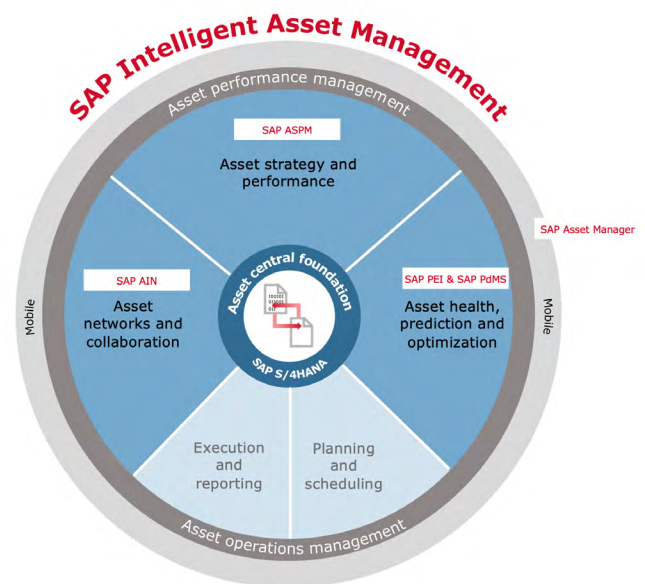

## More transparency in a few days

If you want to make optimal use of the potential of SAP IAM, you should not only know the possibilities of the five solutions. You should also know your maintenance and asset management processes in detail. This will enable you to develop valuable scenarios. In our **Potential Check SAP Intelligent Asset Management**, we work with you to find out how you can benefit holistically and sustainably from SAP IAM. For a fixed price and within two or four days, we will present the suite and the five solutions to you, identify useful application areas and establish a pragmatic roadmap.

## This is why you benefit from the SAP Intelligent Asset Management Potential Check:

- You recognize the potential of SAP IAM and the individual solutions at an early stage using selected use cases from your company.
- You identify strengths and weaknesses, opportunities and risks of your maintenance and asset management processes - and thus potential for optimization.
- You will find out which of the solutions will provide the greatest benefit for you.
- You develop a roadmap for the successive introduction of SAP IAM.

Beyond the **Potential Check SAP Intelligent Asset Management**, we would be happy to assist you in aligning your asset management with SAP IAM.

### This is our procedure:

We offer the **Potential Check SAP Intelligent Asset Management** in a two-day and a four-day workshop. The two-day workshop provides a basic overview. The four-day workshop also explores the specific opportunities and challenges that arise in the company.

	Short description	2 days	4 days
<b>Step 1:</b> Current state	Organizational and master data structures, processes, IT architecture	✓	✓
<b>Step 2:</b> Introduction to SAP IAM (incl. system demos)	Usability: SAP Fiori in interaction with SAP S/4HANA; Functional overview: Organization, master data, processes, reporting; maintenance (incl. mobile), resource planning, service management, spare parts management	✓	✓
<b>Step 3:</b> Definition of company-specific use cases including potential analysis	Analysis of the specific situation in the company with the aim of uncovering weaknesses and potentials		✓
<b>Step 4:</b> Formulation of recommendations for action and design of a roadmap	Individual recommendations for action based on the results of the previous potential analysis		✓

### Why Orianda:

- We have been successfully implementing projects in the SAP environment for 21 years - including management consulting and technology consulting.
- In close cooperation with SAP, we are involved in the further development of the SAP system in the asset management environment.
- We focus exclusively on asset management based on SAP.
- We already have extensive experience in introducing SAP S/4HANA and in implementing solutions in the SAP context.
- We are the only Recognized Expertise Partner of SAP for asset management in Switzerland, Germany and Austria.
